

POWER CURTAIN

The Power Curtain is very useful when you quickly want to divide the area into several sections and to separate cleaner work operations from more dusty work operations, for example in car repair shops where the booths are up to 7-8 m in length. Thereby grinding dust and welding light from car body work can be screened of so as to not be spread into sections where lighter mechanical and re-conditioning work is undertaken. A solution that offers many advantages and has a flexibility that matches many other products.

- Efficient and flexible screening between clean and dusty areas
- Leaves no gaps
- User friendly, motorized operation for up- and down operation of curtain
- Very large curtains, up to 4x8m(HxW) as standard, can be handled
- The curtains, even in large dimensions, hang flat and evenly without folding
- Wide selection of different colours (transparent/non-transparent), to fit individual needs
- Remote control as option for even more practical operation

The electric curtain is delivered ready to be installed with the curtain in place on the rod, motor and wall/ceiling brackets. The motor comes with a control box for up and down mode (manual operation).

As an option **Power Curtain** can be delivered with a remote control. With use of relay boxes, up to 4 curtains can be operated simultaneously by the same remote control unit.

The Power Curtains are as standard supplied in up to 8 m width with a height of 3 or 4 m. We can offer you several designs on the curtain in a mix of up to three different colours. We have a choice of different standard colours in non-transparent or combination of non-transparent and transparent material. Normally delivered with a transparent section (window) in the middle. Aluminium roller 120mm diameter and ribs inserted between the different colour sections gives a sturdy, strong design.

Improving your workspace

Part No.	Power curtain, complete with switch
60314733	W≤ 3000 mm, H=3000 mm
60314743	W≤ 4000 mm, H=3000 mm
